

Building Back Better ODESA

An international workshop exploring ideas
for the sustainable rebuilding of Ukraine

Workshop dates
20.01 -31.01 2025

Lviv / Warsaw

Across the globe, conflicts are causing devastating damage to homes and neighborhoods, leaving millions without a place to call home. Reconstruction efforts in Ukraine should focus on innovative and resilient architecture and urban planning that meet immediate needs while laying the groundwork for long-term sustainability. These efforts could also provide valuable insights for other regions facing challenges, such as war recovery, resource scarcity, or climate change adaptation.
